Aspirant Group, Inc.

Announcement Regarding a Capital Participation in Dipsol Chemical Co., Ltd.

We are pleased to announce that on September 4, 2020, funds related to Aspirant Group (“AG”) have acquired capital in Dipsol Chemical Co., Ltd. (“Dipsol”) through a holding company.

Since its establishment in 1953, Dipsol has been specializing in surface treatment technology to add superior properties and functionality to metal surfaces, such as rust prevention, as an “expert metal dermatologist”. Dipsol began their business by researching the use of surfactants, which were unfamiliar at the time of the founding, and introduced to the world a unique pretreatment agent that removes rust and oil at the same time, breaking the common sense of the time after much hard work as a pioneer. Dipsol also developed the zincate bath for the first time in the world, which has been patented in several countries.

Dipsol, as a pioneer among surface treatment manufacturers and as a comprehensive manufacturer, has always been at the forefront of the industry, building a solid position in the domestic market and expanding its business globally.

Through its surface treatment technology, Dipsol supports the manufacturing sites of domestic and overseas manufacturers in the automobile and the electronics industries and has built a long-lasting relationship with leading manufacturing companies in Japan and overseas.

AG will leverage its resources, network, and management know-how to pursue the continuous growth of Dipsol’s existing business and promote the growth of its new business while upholding their mission to “support a safe and meaningful betterment of life through state of the art technology”.
